Saad Abdelaziz

Full-Stack Web Developer & AI Agents Expert | With 2+ years of experience working with companies in Egypt, KSA, and beyond to provide digital solutions that support business growth and enhance user satisfaction.

Egypt

Summary

I am Saad Abdelaziz, a Full-Stack Web Developer and an expert in AI agents and automation. I help businesses in Egypt, Saudi Arabia, and globally achieve digital transformation by building intelligent solutions and effective user experiences. My journey in programming began in childhood, and over the years I gained deep technical and business understanding through hands-on projects and collaborating with diverse teams. What sets me apart is my ability to combine development, marketing, UI/UX design, and content creation — enabling me to build fully-integrated digital platforms that deliver real results and support business growth. I've had the privilege of working with companies such as Event Horizon, Alamri Contracting, Dhabihatuk to Your Door, Sabel Security & Safety, Alamri Cement Factory, and Konar Contracting. My responsibilities often extended beyond writing code to include content management, marketing support, and continuous optimization — and in some projects, I served as the Acting Marketing Manager. I have strong experience with Next.js, MongoDB, Mongoose, automation development, and AI agents, with a focus on performance, scalability, and exceptional user experience. I am committed to quality, clear communication, and maximizing value for every client. If you have a concept or project and are looking for someone who truly understands your business goals before diving into technical execution, I would be delighted to collaborate and transform your idea into a successful digital product that serves your business and delivers the best experience for your customers.
